French National Gendarmerie chooses GALITT to design its corporate card management application

Boulogne (France), February 26th, 2010

From the 90ies, public administrations are moving toward electronic solutions, so-called “e-Government”. Such solutions make administrative services more accessible by the users as well as internal running more efficient. In this context, the French National Gendarmerie decides in 2009 to secure the access of work stations through a smartcard, a secured device and a card management Web application.

Since June 2008, the French National Gendarmerie runs its own management infrastructure for public keys. The project, initiated at the end of 2009, consists in changing the authentication method of the information system, currently based on *login/password*, by the use of a corporate smartcard supporting a PIN code. At the end of the RFP, the National Gendarmerie selected GALITT to develop this corporate card management application.

The software developed by GALITT is a thin client Web application which allows the National Gendarmerie to manage professional smartcard requests and life cycle of the staffs who have a working station access and are authorized to achieve to this application.

“We are proud to offer our competences in secure electronic solutions for the project of the National Gendarmerie. This software is in line with the dematerialization of procedures and thus with the implementation of strong authentication and signatures” stated Guy-Aubin GARCIA, Managing Director at GALITT, in charge of Engineering Services. “This new project allows reinforcing the active collaboration of GALITT with the National Gendarmerie, initiated since several years with the provision of a card personalization validation tool (VISUCARD®).”

About GALITT (www.galitt.com) – GALITT gathers more than 20 years of experience in mastering e-transactions. Consulting services on payment systems cover the whole project cycle: ANTICIPATE – INITIATE – BUILD – IMPROVE, from a marketing to a technical approach. Company competences include: business consulting, EFT business analysis, design and specifications, project management, acceptance testing and audit. GALITT organizes training sessions dedicated to payments systems and card technologies. GALITT also offers engineering services on transaction systems and embedded software (programming, maintenance), and provides software including simulators (KaNest®, KaNest®-ICC), personalization verification tools (VISUCARD®) and added value solutions (VISUBANK®, private labels...).

GALITT is the recognized leader in France in all its businesses, and the worldwide leader in providing test tools.

Being a reference in the electronic transaction business, GALITT is leveraging internal synergies to provide integrated added value services to the industry.
